## **DETAILED ACTION**

### ***Reasons for Allowance***

The claimed invention is inherently practiced on a computer as shown in the Specification, page 1, second full paragraph, where it recites:

Applicant uses a process to identify those factors that have a significant contribution to the behavior of a phenomenon by using a computer to create a fuzzy cognitive map (FCM).

Therefore, the claims are statutory.

Claims 14-46 are allowed.

The following is an Examiner's statement of reasons for allowance: Claims 14-46 are considered allowable since when reading the claims in light of the specification, as per MPEP §2111.01, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claim 14, including: a "generation" of values for the trial input variables (as defined at page 4, last full paragraph and at page 5, first full paragraph and at page 6, first three paragraphs and at page 8, last full paragraph), a "solution" to produce a meta model (as defined at page 3, first full paragraph and at page 4, last full paragraph and at page 5, last full paragraph

and at page 6, second full paragraph and at page 8, last full paragraph), an "identification" of fuzzy level placement (as defined at page 5, last full paragraph and at page 6, first two full paragraphs and at page 9, first full paragraph), a "categorizing" of fuzzy level placements as positive or negative correlation (as defined at page 1, first full paragraph at page 3, second paragraph and at page 6, middle two paragraphs and at page 7, last two paragraphs), a "categorizing" of the magnitude of fuzzy level placements when there are more than two fuzzy level boundaries (as defined at page 4, last paragraph and at page 5, last paragraph).

Further, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claim 29, including: a "generation" of values for the trial input variables (as defined at page 4, last full paragraph and at page 5, first full paragraph and at page 6, first three paragraphs and at page 8, last full paragraph), a "solution" to produce a meta model (as defined at page 3, first full paragraph and at page 4, last full paragraph and at page 5, last full paragraph and at page 6, second full paragraph and at page 8, last full paragraph), an "identification" of fuzzy level placement (as defined at page 5, last full paragraph and at page 6, first two full paragraphs and at page 9, first full paragraph), a "categorizing" of fuzzy level placements as positive or negative correlation (as defined at page 1, first full paragraph at page 3, second paragraph and at page 6, middle two paragraphs and at page 7, last two paragraphs), a "categorizing" of the magnitude of fuzzy level placements when there are more than two fuzzy level boundaries (as defined at page 4, last paragraph and at page 5, last paragraph).

Further, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claim 40, including: a "generation" of values for the trial input variables (as defined at page 4, last full paragraph and at page 5, first full paragraph and at page 6, first three paragraphs and at page 8, last full paragraph), a "solution" to produce a meta model (as defined at page 3, first full paragraph and at page 4, last full paragraph and at page 5, last full paragraph and at page 6, second full paragraph and at page 8, last full paragraph), an "identification" of fuzzy level placement (as defined at page 5, last full paragraph and at page 6, first two full paragraphs and at page 9, first full paragraph), a "categorizing" of fuzzy level placements as positive or negative correlation (as defined at page 1, first full paragraph at page 3, second paragraph and at page 6, middle two paragraphs and at page 7, last two paragraphs), a "categorizing" of the magnitude of fuzzy level placements when there are more than two fuzzy level boundaries (as defined at page 4, last paragraph and at page 5, last paragraph).

Further, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claim 41, including: a "generation" of values for the trial input variables (as defined at page 4, last full paragraph and at page 5, first full paragraph and at page 6, first three paragraphs and at page 8, last full paragraph), a "solution" to produce a meta model (as defined at page 3, first full paragraph and at page 4, last full paragraph and at page 5, last full paragraph and at page 6, second full paragraph and at page 8, last full paragraph), an "identification" of fuzzy level placement (as defined at page 5, last full paragraph and at

page 6, first two full paragraphs and at page 9, first full paragraph), a "categorizing" of fuzzy level placements as positive or negative correlation (as defined at page 1, first full paragraph at page 3, second paragraph and at page 6, middle two paragraphs and at page 7, last two paragraphs), a "categorizing" of the magnitude of fuzzy level placements when there are more than two fuzzy level boundaries (as defined at page 4, last paragraph and at page 5, last paragraph).

Further, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claim 42, including: a "generation" of values for the trial input variables (as defined at page 4, last full paragraph and at page 5, first full paragraph and at page 6, first three paragraphs and at page 8, last full paragraph), a "solution" to produce a meta model (as defined at page 3, first full paragraph and at page 4, last full paragraph and at page 5, last full paragraph and at page 6, second full paragraph and at page 8, last full paragraph), an "identification" of fuzzy level placement (as defined at page 5, last full paragraph and at page 6, first two full paragraphs and at page 9, first full paragraph), a "categorizing" of fuzzy level placements as positive or negative correlation (as defined at page 1, first full paragraph at page 3, second paragraph and at page 6, middle two paragraphs and at page 7, last two paragraphs), a "categorizing" of the magnitude of fuzzy level placements when there are more than two fuzzy level boundaries (as defined at page 4, last paragraph and at page 5, last paragraph).

Only to the extent that these features (specifically as defined above) are not found in the prior art of record is the present case allowable over the prior art.

***Conclusion***
